Subject: Re: Request for editorial decision for manuscript number 2014_ACSj_12275

After carefully revising all reviewers' comments, the issues they raised, and the authors' responses, as well as their efforts to address all these issues, I am glad to inform that, in my humble opinion; the original manuscript was improved as to comply with the publication standards of ACSJ.

On the reviewers' recommendation to reject the manuscript, however I think that both reviewers were considering this manuscript as some different thing and not, as the same authors stated even since the manuscript title, that the manuscript deals with the development and validation of a "fast and simple" method for the determination of a widely used cephalosporin, method which can be of use and interest for biomedical use.

In brief:

MY RECOMMENDATION IS TO ACCEPT THE MANUSCRIPT IN PRESENT FORM.

Editor's Details:

Dr. Marcelo Daniel Preite

Department of Organic Chemistry, Pontifical Catholic University of Chile, Chile
