SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	**Author's comment** *(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)*
Compulsory REVISION comments	The incidence of postoperative endophthalmitis after cataract surgery is about 0.15%. The presence of any surgical complications increased the risk about 5-fold. It should be absolutely identified that the whether employing the intraocular irrigating solution containing moxifloxacin has any retinal toxicity, or not. The number of patients in your study (9 patients) and retrospective nature and the lack of control group are so insufficient for this. This current study can be a preliminary report or letter to editor.	noted
Minor REVISION comments	1- The authors should stated that "MFLX" is the abbreviation of "moxifloxacin" in Abstract. 2- The irregularity of the "IOL insertion" line in Table should be corrected.	
Optional/General comments
