PART 1: Review Comments

	Reviewer's comment	**Author's comment** *(if agreed with reviewer, corrects the manuscript and highlights that part in the manuscript. It is mandatory that authors should write his/her feedback here)*
Compulsory REVISION comments		
Minor REVISION comments	The inference made from the findings are over stretched outside the scope of the study, More details should be added to the area of study, the gap this study is filling and its implication for the target population. The discussion left some answered questions especially with the use of probable terms. The background should bring out the crux of the study, on why the study has to be done (statement of problem) to warrant the study because Malaria is a known endemic disease. Because before the beginning of the article I already know the results; so bring out the selling point of the article and articulate it in the abstract too.	All comments by the reviewer have been noted and all necessary corrections have been effected.
Optional/General comments	The article is precise and good
