SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments		
<u>Minor</u> REVISION comments	<ul style="list-style-type: none"> - I think it was better to widen the limit of author's systematic review, as they conducted their review between October and November 2013, with a last 107 update in April 2014, as this time is so short the authors found a very limited number of publications. - It was better to involve the key words of bone density, joint mobility, muscle strength and physical fitness and/or exercise tolerance in authors review as all above mentioned variables along with quality of life are areas of defect for hemophilia patients. <p>According to Ithenticate test plagiarism is 8% there is an attachment for the test</p>	<p>The systematic search of databases was done between the months of October and November 2013 Subsequently, in April 2014, we updated the search. The articles did not have time limit therefore that the publication was no limit search (only had to have been published up to April 2014).</p> <p>We include those keywords, based on MeSH terms. We made search with the terms physiotherapy physical therapy and rehabilitation throughout the text. By using these words, we make sure that all articles that contain those words in the text would be identified, without using more keywords.</p>
<u>Optional/General</u> comments	This study is good and valuable even it needs to minor modifications listed above.
