SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	**Journal of Cancer and Tumor International**
Manuscript Number:	**Ms_JCTI_38860**
Title of the Manuscript:	**Colon Cancer: Epidemiological And Histopathological Aspects In Cameroon**
Type of Article:	**Original Research Article**

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	**Authors' response to final evaluator's comments**
The authors need to actually go through the paper and correct **all** the problems cited in the original review, not just a few of them. For example, the writing was cited as needing careful editing and improvement. The revised paper still contains sentences such as: *"The rest colon cancer pathology relatively frequent in Cameroon or it comes in second place among malignant tumors of the digestive tract."* I have no idea what that means. The H/F – all of them, not just one – need to be corrected to M/F, the revised paper contains such sentences such as "*the sex ratio H / F is 3/2 with almost 95% of patients diagnosed after 50 years [1-3]. Incidence rates vary from continent to continent and high incidence countries are Western Europe, North America, Australia, New Zealand and Japan [4-8]. In France, the sex ratio H/ F is 1.22 with a mean age of diagnosis of 71 years in men and 73 years in women [3, 9, 10]]. In Canada it is the 2nd most diagnosed form of cancer (13% of all cancers combined) with more than 90% of patients older than 55 years; the sex ratio H / F is 1.25 [11, 12]. In Africa the incidence is lower; this is the case of Togo, the sex ratio H / F is 3/2 with an average age of 46.7 years."* After citing in the review that HNPCC is NOT a major risk factor for colon cancer in the West, since most cases are sporadic, the revised paper still contains: *"However, there are also 2 cases (0.85%) of HNPCC syndrome; This is somewhat different from Western analytic studies, which show that this syndrome is the major risk factor for colon cancer [16, 45]."*
