SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	**Author's comment** *(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)*
Compulsory REVISION comments	**The English is very poor. The Abstract should read as follows :** The present study was conducted to know the status of pond fish farming in Saidpur upazila under Nilphamari district of Bangladesh. The survey research was conducted on 40 fish farmers from October 2016 to March 2017. Farmers were randomly selected from selected areas. Primary data were collected through a survey questioner; secondary data were collected from relevant literature. Average size of ponds was 8-30 decimals? and containing 3- 6 month water holding capacity with 65% seasonal pond. Average stocking density was found to be 1500-2000 fry/ha. Most of the farmer applied local feed. About 30 % of the farmers did not find fish diseases, 55 % of the farmers mentioned that diseases occurred occasionally while 15% noted outbreaks of diseases every year. Production rate of the 40% respondents were very low, only 20% were high, main problem is water scarcity and inadequate technical knowledge therefore more extension and research are needed to increasing production **1 Introduction: 21** Fisheries sector play an important rule to develop the socioeconomic condition of an agricultural based country, like Bangladesh. ----should read as below: **1 Introduction: 21** Fisheries sector play an important role in developing the socioeconomic condition of an agricultural based	

	country, like Bangladesh. **Line 27 should read:** About 17.8 million people are partially engaged in fisheries sector for their livelihoods Lie 66-70 should read: Good communication facilities also help researcher to work in this area. To increase fish production there is need for a baseline study for proper management and planning. This study was based on collection of primary and secondary data. Before collecting the primary data, well structure questioners were developed and pre tested on a few farmer in adjacent areas. A major problem with this work is bad English.It is very hard to read the work and understand. A complete overhaul of the English is necessary. More over I tried to correct all but it was simply toomuch.	
Minor REVISION comments	References were badly written. Some had year after names of authors and some do not etc.	
Optional/General comments
