

## SDI FINAL EVALUATION FORM 1.1

### PART 1:

|                          |                                                                                                                                                        |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|
| Journal Name:            | <a href="#">American Journal of Experimental Agriculture</a>                                                                                           |
| Manuscript Number:       | 2014_AJEA_13832                                                                                                                                        |
| Title of the Manuscript: | Investigation of Standard ear yield and some Agronomic Characteristics of Baby Corn Var. ksc 403 su under influence of Planting Date and Plant Density |

### PART 2:

| FINAL EVALUATOR'S comments on revised paper (if any)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Authors' response to final evaluator's comments                                                                                                                                                                                                                                                                                                           |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>Language quality should be improved in each and every section. The author did not follow the earlier comments in this regard.</p> <p><b>In Materials and Methods section</b></p> <ul style="list-style-type: none"> <li>i. it needs to state the measurement of standard and sub-standard ear.</li> <li>ii. After how many days of silking the ear was harvested-mention please.</li> <li>iii. Data on days to silking need to be incorporated.</li> <li>iv. Unit of yield (i.e. <math>\text{kg ha}^{-1}</math>, <math>\text{t ha}^{-1}</math>) was not mentioned in the table.</li> </ul> | <ul style="list-style-type: none"> <li>• Regarding the comments referee article has been reviewed.</li> <li>• We didn't used the number of days to silking to measure other parameters. The data usually used for investigation on effects of sowing date and during the period of maturity on seed and sweet corn varieties, not in baby corn</li> </ul> |
