

Here are the most important summary notes:

1. All points raised by the 3rd reviewer were corrected and shown in yellow as requested;
2. All references were marked in yellow indicating that they were changed to reflect the request of the 3rd reviewer that all references should be in PubMed format;
3. The duplicate text in line # 328 & 329 shown in yellow and crossed should be deleted to remove the redundancy;
4. Table 3 was repeated twice in the original article, that why I marked the second one for deletion (Line # 177-179);
5. The tables numbering within the original article was corrected and shown in yellow (see next point);
6. All tables and figures were separated into a new MS Word file under the name "BJAST\_14003\_Tables\_Figures" as requested by the 3rd reviewer, but I kept those in the original research article to keep the line numbering as it is.
