| Journal Name:            | <a href="#">British Journal of Applied Science &amp; Technology</a>              |
| Manuscript Number:       | 2014_BJAST_14465                                                                 |
| Title of the Manuscript: | Some Fully Symmetric Quadrature Rules for Approximation of Complex Line Integral |
| Type of the Article      | Original Research Article                                                        |

**General guideline for Peer Review process:**

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound.

| <b>Compulsory</b> REVISION comments |                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                               |
| <b>Minor</b> REVISION comments      |                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                               |
| <b>Optional/General</b> comments    | <p>The reviewer recognizes that a significant effort was done by the authors with the construction of some quadrature rules of algebraic degree of 8 precision nine, thirteen and seventeen for the approximate evaluation of integrals of an analytic function on a 9 line segment in the complex plane.</p> <p>The content deserves to be published and the text has substantially become understandable.</p> | Thank you.                                                                                                                                                                    |
