Subject: Re: Request for editorial decision for manuscript number 2014_BJMCS_14233

My editorial decision is to accept the article given the initially positive comments by the reviewers and the revisions by the authors. Although the following comments should be made:

R1#2.- add some future research directions

Only a sentence is added: "This method will be further investigated in future for the extension to colored images and in the second direction, the other type of noise will be considered."

R2#2 noise

The authors added the term Salt and Pepper noise into title. This is a somehow artificial problem.

R2#3 more specific results in the abstract

The terms were added but not specific results.

R2#10 From Figure 3, how we select the good value for alpha?

The reply is somewhat abstract.

R2#11 noise range tested in this experiment is very low

Although the authors reply that "The method works smoothly for higher noise also" no specific metrics are provided.
