SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	British Journal of Medicine and Medical Research	
Manuscript Number:	2014_BJMMR_14539	
Title of the Manuscript:	Sexual Behaviour of Secondary School Students in Port Harcourt	

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
Good progress, I think u are at the edge of publication, infect this few comment and try to look it ones more critically the it is done.	
Page 2 line 1	
opposite sex were positively associated with having sexual intercourse	
(P=.000) and (P=.000). (Please add the Odd ratio confidence interval)	
Page 2 line 1 In the conclusion part please add some simple recommendation like e.g school students	
in Port Harcourt alternative strategy should be designed reduce the risk of	
adults to STDs.	
Page 4 line 18	
Instead of saying, Majority (80.2%, 840/1047). Around 80% described	
themselves as serious Christians. Just to avoid redundancies.	
Page 5 line 19-22	
Please rewrite the hole paragraph expressively, b/c it your major finding	
with interesting odd ratio. Here some example that I think it helps you.	
e.g,1	
TB suspects who had a contact history with a TB patient in the family were 9 times more likely to	
have TB than those who did not have a contact history, $[OR = 9.1, (4.0, 20.5)]$. Individuals who had	
poor [OR = 5.2, (95%CI: 2.3, 11.2)] and fair knowledge [OR = 3.7, (95%CI: 1.3, 10.4)] about TB	
Instead of saying, Majority (80.2%, 840/1047). Around 80% described themselves as serious Christians. Just to avoid redundancies. Page 5 line 19-22 Please rewrite the hole paragraph expressively, b/c it your major finding with interesting odd ratio. Here some example that I think it helps you. e.g,1 TB suspects who had a contact history with a TB patient in the family were 9 times more likely to have TB than those who did not have a contact history, [OR = 9.1,(4.0, 20.5)]. Individuals who had

were more likely to have TB than individuals who had good knowledge.
e.g 2
Adults who dated opposite sex had 2 times more likely end up having sex than those who did not [OR = 2.8,(2.0, 3.8)].....
From this finding it will be even good if you add some in the abstract part of the result section
