

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	International Journal of Biochemistry Research & Review
Manuscript Number:	2014_IJBcRR_13997
Title of the Manuscript:	Effect of L-arginine in eNOS expression in heart tissues of diabetic rats

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
I have made some corrections directly and highlighted them in green. Most of the corrections were made as a result of grammatical errors; others, arrangement. As for the tables and figures, they need to be labelled properly as in the journal instructions. Table 1 and not Table (1) If values are significantly different, then letters can be used as superscripts to indicate within the table. The P value and mean$\pm$ SEM need not be included in the table, but should be indicated as a footnote. Title for Table 1 Table 1: Effect of L-arginine on blood glucose, lipoprotein, and some antioxidant parameters in alloxan-induced diabetic rats. Below the table, a footnote can be written thus: Values are mean$\pm$SEM. Values with different superscripts within the same row are significantly different at P<0.001. Figure 2 and not Figure (2). Figure 2: Correlation between MDA (should be written in full) and blood glucose level in in alloxan-induced diabetic rats. So use the title written above to correct other correlation figures. Below figure 4 is a footnote and not part of the title. The result on NO was not discussed even though the authors wrote extensively on NO. It is important to relate the results to the discussion
