

#### Editorial comment:

As pointed out by the reviewers the manuscript style and the English languages need great improvement. Also, the methods must be written a more scientifically. Here are some examples of writing mistakes:

L 102: triplicate, not thriplicate.

L 114: Duncan test, what was the P value.

L 228: and elsewhere in the paper, mixture not mix.

L 285: average, not average; diseases, not desease

#### Author's feedback:

In my first manuscript I wrote mixture but onather reviewer sugested t write mixed. Wich one is right

In Indonesia usualy we write Duncen test but maybe you right it's abaot P value and i will change it

Trhiplicate, deseases are wrong I try to revised them but I will change some of them and sent my manuscripk to english translate agent
