

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	International Journal of TROPICAL DISEASE & Health
Manuscript Number:	2014_IJTDH_15117
Title of the Manuscript:	Seroepidemiology of toxoplasmosis in pregnant women attending antenatal clinics at the centre for maternal and child health care in Daloa in Ivory Coast.

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
1. I don't see more details in the manuscript. 2. Of course, infection during the 3rd trimester is a risk factor <u>for the foetus</u> but not for the mother. Your manuscript is about infection in pregnant women. 3. The quality of a paper is much more improve when good statistics are used, specially if you have the data to do it. 4. The discussion was slightly improve and the conclusion need to be fuscous to the objectives of the study.	1- Reply to the issues 1 We added a few sentences at the end of discussion part to show how socio-demographic parameter such as the type of housing could influence the transmission of toxoplasmosis. 2- Reply to the issues 2 Yes, you are right. We work on pregnant women but in relation to the consequences that infection might cause on health of the fetus. We wrote a few sentences to make it clearer. In addition, in Table 1, we have not specified that the parameters mentioned were all risk factors. These are socio-demographic parameters for which some might have a link with the occurrence of the disease. 3- Reply to the issues 3 We agree with you, more statistic give power to the results. Here we just want to emphasize relation between seroprevalence and socio-demographic parameters that could influence the pregnancy and its future. 4-Reply to the issues 4 We make changes and focused the conclusion on the objectives of the study
