

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	International Journal of TROPICAL DISEASE & Health
Manuscript Number:	2014_IJTDH_15117
Title of the Manuscript:	Seroepidemiology of toxoplasmosis in pregnant women attending antenatal clinics at the centre for maternal and child health care in Daloa in Ivory Coast.
Type of Article	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
This reviewer evaluated the manuscript on their scientific context and suggestions are made to improve its quality that may also be considered for the authors for further studies. I am completely aware of the epidemiology and life cycle of the parasite and the many risk factors associated in the transmission to humans. If authors considered the type of housing as an important risk factor, more detailed information and much more discussion should be included. This a seroprevalence report in pregnant woman and not about the risk of congenital transmission, so pregnant woman can became infected at any time. Being infected during the 3rd semester is NOT a risk factor. The manuscript reports risk factors; if risk factors are not important for the manuscript then must be deleted or describe them in a correct way (including OR and CI). Authors did not followed all other recommendations.
