SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	The manuscript mentions about the effect of manure on soil fertility. First the English must be reviewed, there are many repeated phrases such as...the results showed that...., the results indicated that....., which sounds not good in a publication. The literature should be improved in the discussion, it just make a comparison of results with other authors. Sometimes the author should comment and explain their own results and see if the literature the support or contradict their explanation. The figures 1A to 2H should be reduced because many of them are there unnecessarily. Just insert the most important ones which can explain your results and your initial objectives. I recommend to have a discussion separated to the results, than he authors would be able to explain better their results.	Addressed accordingly The repeated phrases have been corrected accordingly Improved accordingly Corrected accordingly Having discussion separately will not conform to the journal format.
<u>Minor</u> REVISION comments		
<u>Optional/General</u> comments
