SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	1. Introduction should be re written it is too basic in nature. 2. U have taken crude extract of chloroform why not through fractionation.	Fractionation and isolation of active principle is recommended for further study.
<u>Minor</u> REVISION comments	If ethanolic extract showed antipyretic and anti inflammatory activity then why you selected chloroform fraction only?	A preliminary work was carried out using petroleum ether, methanol and chloroform extracts and the chloroform extract gave the highest activity and was then subjected to further investigation.
<u>Optional/General</u> comments
