

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	Journal of Advances in Medical and Pharmaceutical Sciences
Manuscript Number:	2014_JAMPS_14855
Title of the Manuscript:	Isolation and Structural Elucidation of the Most Active Antidiabetic Fraction of Corchorus Olitorius Seed Extract

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
The authors did not fully responded to suggestions because Results section text is still confusingly written and have to be improved. Also, rat strain was not indicated, because "white" is not a strain.	(Sprague Dawley rats) effected. About the results, they are quite alright and will make meaning to those in the field of study. To help you understand- first read 2.2 (lines 97-105) then go to 3.1. next read 2.5.2 then go to 3.2 (which refers to no significance was observed using blood sugar change ie computing results before treatment and after treatment BUT meaningful on using percentage reduction in blood sugar ie untreated FBS minus treated FBS divided by the untreated FBS multiplied by 100). For 3.3 and 3.4, it will make meaning to the researchers in that field. I don't mean to offend you all if it is perceived offensive. Greetings.
