**PART 1: Review Comments**

|                                            | Reviewer's comment                                                                                                                                                                                                                                                                                                                                   | Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)                                                                                                                                          |
|--------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><u>Compulsory</u></b> REVISION comments | As author has explained in surgical method, several procedures were used in primary surgery. In case 1 with traumatic retinal detachment, it may be indicated but in case 2 if high PVR grade is not the case all these procedures are not indicated. It is better the the author give some more details about the ocular examination before surgery | We are grateful to you for the prompt evaluation. Questioned the possible presence of PVR in case 2. However, our indication for the surgery was primary vitrectomy with encircling band for the rhegmatogenous retinal detachment despite the absence of PVR and therefore we did not make any amendment in the text. |
| <b><u>Minor</u></b> REVISION comments      |                                                                                                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                                                                                                        |
| <b><u>Optional/General</u></b> comments    | 1-Occurence of 2 very rare complications in a rather short period by one surgeon is some questionable.<br>2-I fee some similarity in script and photos with some articles in literature.<br>I suggest more evaluation about authenticity of article                                                                                                  |                                                                                                                                                                                                                                                                                                                        |
