SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	The authors didn't respect the journal guidelines. In the introduction there are concepts repeated many times, details about political and economic situation of the geographic area interested by the research. The methodology is very poor: it is limited to a document analysis coming from three private eye clinics: no documents from big hospital are provided. No statistical analysis has been performed. The conclusions are not coherent with the results.	The only data that were available are from private eye clinics. This paper is based on existing documents; therefore, the data are sufficient to be used in describing the prevailing eye situation in the region.
Minor REVISION comments		
Optional/General comments
