SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments		
<u>Minor</u> REVISION comments	In the Abstract, change the p values with the raw scores that are more informative: In the Results section, add the following clarifications: - Explain the meaning of the $\pm$ values, e.g. standard deviations, confidence intervals?; - Follow up comparisons are sufficient with respect to the T2 condition; In the Discussion section, acknowledge some limitations of the study: - The use of an original cumulative reading rate as dependent measure and not of a standardized reading measure; - The missing of 6/14 participants at T3; - The short, 4-weeks, interval to test the follow up situation; - The small sample of the "reverse group"; - The comparison with the results of the previous study (please cite on line 225) cannot be done without an estimation of the parameters (i.e. confidence intervals) or a statistical comparison.	
<u>Optional/General</u> comments	I did not check if the manuscript format adheres to the journal's guidelines.
