

SDI Review Form 1.6

Journal Name:	American Chemical Science Journal
Manuscript Number:	Ms_ACSJ_24525
Title of the Manuscript:	Size Effects of Silver Nanoparticles on the Photovoltaic Performance of a Dye Sensitized Solar Cells.
Type of the Article	Original Research Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound.

SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<u>Compulsory</u> REVISION comments		
<u>Minor</u> REVISION comments	The title of the paper stress on the size of nanoparticle NP effect on DSSC. However the size is quantified via SILAR, It would be better if the size of NP is observed using TEM. So the exact size can be identified and become more reliable and repeatable. Or using AFM so that the roughness of the surface can be quantified rather using SEM	ok
<u>Optional/General</u> comments
