SDI Review Form 1.6

PART 1: Review Comments

| | Reviewer's comment | Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here) |
|--|--|---|
| <u>Compulsory</u> REVISION comments | From the article it is not clear what are currently used therapeutic strategies of the treatment of PD. It appears that the authors want to refer to the more effective treatment by blocking the production and aggregation of alpha-synuclein in PD patients (may be). What are the experiences with this therapeutic strategy? Is it only a recommendation? | |
| <u>Minor</u> REVISION comments | The article is a few mistakes. line 54 - a-synuclein but α -sinuclein line 139 - ... drugs (NSAID) for the treatment of PD has a certain significance [17,18]. More correct is drugs (NSAID) for the treatment of PD have a certain significance [17,18]. I recommend to check English still once more | |
| <u>Optional/General</u> comments | The article is written clearly and comprehensibly. It is given complete information on the status of alpha-synuclein in the pathogenesis of PD and the authors refer to the fact, when PD treatment in the early stages would be successful. | |
