

Editor's Comment:

I have now reviewed the revised paper and have noted the reviewer comments.

I note that the authors disagree with the reviewer comment regarding the strength of their argument about the link between climate change and music. I believe their argument is still mediocre, for example, stating that the wood required to make musical instruments is causing climate change. Well, yes, every product that we as human build from natural products in our environment has some impact on that environment. To say this will cause climate change is somewhat a shallow argument. I suspect large scale mining and car pollution are much more obvious contributors.

The authors have also made a number of grammatical errors throughout the paper, including errors in the additions that they have made in yellow.
