

Editor's Comment:

Far from my domain. Nevertheless I do not validate this publication.

This article is very similar to the following one (much more complete and half of the results in this article are similar) :

Physical Science International Journal, ISSN: 2348-0130, Vol.: 6(2)
Geophysical Evaluation of Erosion Sites in some Parts of Abia State, Southeastern Nigeria
U. J. John, M. U. Igboekwe and C. Amos-Uhegbu

The article presents only two new locations on the four used in the article. So it must concentrate on the added value of the two new locations and the associated analysis. If there is no added value this article is redundant with the previous one.

Furthermore, updates must be made for the references :

some are used in the text but not in the references at the end of the document :

I 40 (Whitford, 2002).

I 109 (Ibe et al., 1998)

some are used at the end of the document but not used in the text :

I 415 Ajayi

I 420 Amos-Uhegbu, C. (2014).

I 430 AASHTO (1988).

I 436 BS1377 -> I 160

I 444 Egboka, B.C.E.

I 451 Head, K.H

I 458 Igboekwe

I 462 Jegede

I 479 Polito

I 506 Zohdy, A. A. R. (1989)
