

**Editor's Comment:**

I have minor comments to the manuscript "Performance of Packaging on Shelf life and quality of Fenugreek at Different Storage Conditions in Kharif Season",

1. - At the end of the different results, authors wrote "These findings are in agreement with those of previous workers", "The results obtained are similar to the observations of previous workers ", etc. These studies were similar in conditions, plant, packing, etc? Describe more the similitude of these studies with this research and describe it is the same plant or other.

2. - Conclusions must not be as a resume of results, is better to result the most important and is recommendable to add some perspectives.
