

Editor's comments:

This is only one season's data. I do not understand the significance of this study. Therefore, I do not consider fit for publication as full length paper. You can accept it as short research article. The authors still have to add the reason why this study is being done and what is the implication of findings.

Author's feedback:

The purpose of study was to obtain the optimum size and shape of blocks in sunflower crop. In uniformity trial data, only one year data is sufficient. I have also worked on some other crops with the same objectives and published the findings as full length paper as these findings are very helpful in future studies.
