**PART 1: Review Comments**

	<b>Reviewer's comment</b>	<b>Author's comment</b> <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here). Thanking Reviewer for valuable comments. I have done all corrections according to the Reviewer's comments.</i>
<b><u>Compulsory</u></b> REVISION comments		
<b><u>Minor</u></b> REVISION comments		
<b><u>Optional/General</u></b> comments	Number of sample per group was quite small, N = 6. In discussion, increased number of white blood cell indicated inflammation as seen in histopathological investigation. Decreased rbc, Hb, and PCV indicated decreased rbc production or increased rbc destruction.	The number of samples per group, N= 6. There was no way to increase the number of samples, because the whole number of rats in the animal house is limited. I wait for three months to get that number. The number of cages was not enough, and the space is not wide. Discussion: O.K. Corrections highlighted yellow.
