SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<p>Methods</p> <ul style="list-style-type: none"> - Detailed procedures are not required to be described, a reference to the method used would suffice. The objective of the paper gets diluted because of such lengthy explanations <p>Results</p> <ul style="list-style-type: none"> - Instead of mentioning the names of all the groups again and again (i.e. Nicotine, nicotine + stress, etc) the authors can name the groups as A, B, C etc so that it becomes easy to read and comprehend. <p>Citation style</p> <ul style="list-style-type: none"> - The authors are abruptly ending sentences eg: 'is in agreement with earlier report of [3]', this is not allowed in scientific writing, please write the name of the first author of that paper followed by et al and then cite the reference number <p>Placement of figures</p> <ul style="list-style-type: none"> - Kindly place the figures of graphical representation and histopathology along with the relevant paragraph in the results section <p>Number of figures</p> <ul style="list-style-type: none"> - The representation of figures may be limited to important concepts of the paper and not for all the outcomes assessed - Kindly stick to the journals guidelines for the maximum number of figures, tables and word count. 	
Minor REVISION comments	<p>Introduction</p> <ul style="list-style-type: none"> - One feels unable - Please abbreviate all the words at first use and once abbreviated use it consistently throughout the text and refrain from using the word again <p>Methods</p> <ul style="list-style-type: none"> - Weight of the wistar rats is mentioned here as 150 – 220 whereas in the abstract it is 150 – 200 - Please write the approval number for the study - Rodents are quite not....attentions of passers-by (not required) - The left cauda epididymisanimal was then obtained and recorded (not required) - Twenty microlitres of 0.05% eosin Y–nigrosin....for each assay (not required) - Serum was obtained following the method previously described in preceding sections. The serum was then used for reproductive hormonal assay (not required) - Serum testosterone, luteinizing hormone and follicle stimulating hormone concentrations were determined using the enzyme linked immuno-sorbent assay (ELISA) kit method as used by ? (please abbreviate) - The testis and epididymis of the controlof x100 were viewed (kindly write in brief). <p>Results</p> <ul style="list-style-type: none"> - Sperm motility parameters (motile sperm was) – motile spermatozoa / motile sperms <p>Discussion</p> <ul style="list-style-type: none"> - of either of (grammatical error)
