

SDI Review Form 1.6

Journal Name:	Asian Journal of Advances in Agricultural Research
Manuscript Number:	Ms_AJAAR_40051
Title of the Manuscript:	Inducing Salinity Tolerance of Rosemary (Rosmarinus officinalis L.) Plants By Chitosan or Zeolite Application
Type of the Article	Original research paper

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments		
Minor REVISION comments	Reviewed the manuscript Ms_AJAAR_40051 entitled "Inducing Salinity Tolerance of Rosemary (<i>Rosmarinus officinalis</i> L.) Plants By Chitosan or Zeolite Application". I read the manuscript rather carefully, and tried to understand the intention of the research. The study aims at identification the impact of salinity on rosemary growth, oil percentage and chemical compositions. The objectives of work and experimental results appear to be interesting and relevant to the Journal. However, I have few concerns regarding this manuscript and suggest revision of the presented text. #Abstract: The authors must include in abstract the conclusion about the chitosan application. #Introduction: The authors must: - To improve the English. - To mention the importance and prevalence of the Rosemary in Egypt (line 19). - To explain with more detail the phrase in line 22-23. #Material and Methods: The authors should explain in 2.2 the number of application of chitosan and zeolite and why use the concentrations of chitosan, zeolite and NaCl. Is there a reference or other similar study that use these concentrations? #Results and Discussion: In this study were used five replications, in other words, the authors used five plants. Correct? In the all tables, the authors must include the standard error or standard deviation. The results and discussion section should be reported if the treatments significantly increased or decreased the parameter under study and in what percentage or value, to be easier to reader interpretation. #Conclusion: As in abstract, the authors must mention the conclusion about chitosan application. In addition, the authors should also the importance of this study and the future perspectives. #References: The authors have to format the references according to the rules of the journal. The reviewer could not relate the references throughout the text.	Thank you for all comments that will increased the value of our manuscript. Included the most effective chitosan concentration in the abstract also We checked the English and improved it Done, where they are used in folck medicine and spiece Done The concentrations of all chemical used were selected from the premieraly studies All tables included SD and letters We reduced the discussion section as we can Included as in abstract Ok done according the journal formate
Optional/General comments		

As per the guideline of editorial office we have followed VANCOUVER reference style for our paper.
