SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	1. The abstract is quite unconventional from the usual style of writing as a continuous single paragraph 2. Table 1 shows the distribution of the 322 respondents. However, it is not clear the reasons for unequal share of respondents in the 3 categories. Whether the authors have adopted proportionate sampling technique? 3. Line No: 94. It is stated that questionnaire was used for data collection. Whether data were collected through mailing the respondents? If not, interview schedule is the appropriate term against questionnaire. 4. Line No: 114. ANOVA or ANNOVA? 5. Table 5 presents the correlation results. Correlating annual income with betel leaf income looks illogical if interpreted that increase in annual income leads to increase in betel leaf income but the reverse may hold true. Hence, a multiple regression analysis would give a meaningful inference.	
<u>Minor</u> REVISION comments	1. There are a few grammatical (Line 126, 203: on an average instead of on average) errors exist in the manuscript which shall be rectified.	

SDI Review Form 1.6

<u>Optional/General</u> comments	The study gains significance by analysing the socioeconomic characteristics of the betel vine growers against their income in Teknaf Peninsula, Bangladesh. It is recommended for publication after incorporating all the above comments and suggestions.
