SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<u>Compulsory</u> REVISION comments	It is a good study, of a lot effort, but lack of bibliographical references may do to lose its validity. Very few bibliography, 6 references, half are theses and only have two articles of scientific journals, is very little support for this study, Where do the affirmations of the introduction come from? Place the bibliography of statements. On lines 59, 60, 63 to 68, where do statements come from? There is no reference to another similar study to be able to compare them.	Necessary bibliographical references were added as advised. Some more relevant references supporting the study were incorporated. Necessary bibliographical statements were incorporated. Required references added. References to other similar studies incorporated.
<u>Minor</u> REVISION comments	On lines 51, 52, 60, 61, 62, 64, 74... change house by poultry house, poultry barn, broiler shed, or poultry shed. House can be confused with human construction. At the end of the methodology (line 43), I believe that the annual cycles are less than 8, since the poultry sheds require some days of sanitation and disinfection.	Required changes incorporated. Necessary modification and corrections done.
<u>Optional/General</u> comments	Could you attach photos of the poultry sheds of the treatments? In order to give greater understanding of the facilities to people from other latitudes.	Thank you for the suggestion for improvement of the paper, however, good quality photographs related to the study are currently not available. The point is noted for related future study and preparation of manuscript.
