<u>Compulsory</u> REVISION comments	The manuscript is very good and it gives room for other researchers to work on but the major corrections are required in Abstract, Materials and Methods and Results parts of the manuscript. Following the review of Research Article titled "Improving Nitrogen Use Efficiency of Urea by using Urease and Nitrification Inhibitors and Plant Growth Regulators under Spinach Crop". Since the requested changes are major, I recommend that it should be revised taking into account the changes requested as follows; • Under the abstract, the full meaning of nBTPT, DCD and DMPP should be written first before the acronyms for easy understanding. Thanks • Under abstract, which method of soil sample did you used to collect your soil sample and at what depth? Please, give detail. • Under the Materials and Methods, how did you carry out your physio-chemical analysis or according to whom, please make reference. • With what instruments or equipment did you use to measure your growth and yields parameters? kindly give details • The values in Table 1 and 2 should be in two decimal places for uniformity.
