SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	Abstract is too wordy, there are grammatical errors in the manuscript and the author should also be consistent in the use of present or past tense. Too long sentences should be divided with a full stop where necessary. The introduction is disjointed. The author should provide only relevant information which relates to maize production, marketing in the study area and the need for economic analysis. I would advise the introduction should be re-written with less focus on agronomic information and climate. All tables should be removed from the introduction and subtitles. The author should avoid the use of "strategy" in the subtitles as well. Table 231-246 should be completely removed. Line 150-152 should be removed. Too many information and non consistency in the manuscript will make readers lose focus. Line 644 to 650, technical efficiency was not well addressed. It is not only about whether inputs have significant impact on output or not. Also crosscheck the significance of the variables again such as manure. The variables should be listed in the table rather than "log"	
Minor REVISION comments	Results should be well interpreted e.g. line 876 should read "Result (Table 15) indicate that". The sampling technique should be revised as A multistage sampling technique was used for the study. Then the stages should be specified. The author should note that samples have to be stratified before doing a final random sampling and not random sampling before stratification.
