| Journal Name:            | <a href="#">Asian Journal of Agricultural Extension, Economics &amp; Sociology</a>             |
| Manuscript Number:       | Ms_AJAEES_36873                                                                                |
| Title of the Manuscript: | Farm and Non-farm Income Diversification in Selected Areas of Sunamganj District of Bangladesh |
| Type of the Article      | Original Research Article                                                                      |

**General guideline for Peer Review process:**

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

(<http://www.sciencedomain.org/page.php?id=sdi-general-editorial-policy#Peer-Review-Guideline>)

**PART 1: Review Comments**

|                                          | Reviewer's comment                                                                                                                                                                                                                                                          | Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here) |
|------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Compulsory</b> REVISION comments<br>. | The author presents a very interesting and extensive study, but some questions remain to be clarified.<br>For example, it is unclear what level of reliability and generality of results, if the study was conducted on the material of the population of only two villages |                                                                                                                                                                               |
| <b>Minor</b> REVISION comments           | The criteria for choosing the number of questionnaires and respondents are unclear.                                                                                                                                                                                         |                                                                                                                                                                               |
| <b>Optional/General</b> comments         | It is expedient to estimate the obtained results for autocorrelation using the Durbin-Watson statistics                                                                                                                                                                     |                                                                                                                                                                               |
