PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	This is a potentially interesting paper that needs some rewriting and reorganization before it can be considered for publication. Currently, there is an insufficient linkage between the literature review and the conceptual framework which is to be tested by the research questionnaire. The author should highlight at the end of the literature review what is known and, therefore, what is not known about this situation. The methodology section needs to be completely rewritten. The questionnaire development and testing process must be specified in detail. The language used should be considered. The issues surrounding non-response bias are particularly important in research in rural areas. The findings should include a proper description of the demographic characteristics of the sample achieved. A discussion section should be added to consider the performance of the conceptual framework – this is where the claim for contribution to academic knowledge will be made. The conclusion should include the limitations and the suggestions for future research.
