

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	Asian Journal of Agricultural Extension, Economics & Sociology
Manuscript Number:	Ms_AJAEES_43337
Title of the Manuscript:	Contribution of Animal husbandry to Indian Economy, its characteristics and future: A review
Type of Article:	Review Paper

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
- Although the author has improved manuscript but still need some improvement for final acceptance of manuscript. I suggest the authors to add some recent data on livestock contribution to employment, food security, integrated farming system and women empowerment. - Mention the reference style in text part as per journal guidelines that is instead authors name or others source write it in numbers [1], [2] etc. especially in abstract part. As in abstract part it is not necessary to mention references. - Add contributions of buffalo sheep and goat also as you have focus mainly on one cattle. - Add recent data on contribution of livestock to employment generation. - Although you have mention the area where women play important role but to make more valid your manuscript add some statistical data. - In Integrated farming again You have not added integrated framing system is more profitable to which agro- climatic zone of India and which type of integrated farming system is most profitable and provide more income, employment and foods security. Mention some data related to integrated farming also. - Add more digital India programme for animal husbandry development	- Data has been added for integrated farming system(ifs) (only limited articles were found on ifs and one is of 1999) line 74-80. Line 39 data on employment added. Quantitative data not available on women empowerment even in Department of animal husbandry report. - Apologies. citations had to be added as a reviewer had demanded data to be added in the abstract .Data couldn't be added without citing the main source of such data that is the livestock census. Thus now the language in abstract has been generalised so as to rule out the need to cite reference. - Data on goat sheep population added line 23-24. Line 88-89 data on buffalo meat export added. - Line 39 data on employment added. - Statistical data was difficult to find specific for women empowerment kindly excuse on this topic. - Only limited articles were found on ifs. Information on integrated framing system for respective agro- climatic zone was found only for tamilnadu and on Tamilnadu agriculture university website. If I may be permitted to add generalized info on ifs suitable to agro- climatic zones of India without any authentic source citation for ex. Intergrated farming of paddy and fish in Arunachal pradesh and paddy and prawn of Kerala. 167 -172- pashu sanjeevni and E pashu haat mentioned. - Edited to the best of my knowledge any further mistakes will be edited as directed. Kindly excuse inability to add some suggestions.
