<p>I have not seen the issues i raised addressed in this work. The references are not coordinated to be published in a reputable journal. The authors spoke about seismic survey and i have not seen any input of that in the manuscript.</p> <p>I feel under pressure right now, please kindly use your discretion to make final statement to the authors. I have made some review comments on the manuscript (see attached), they should address these issues. If they can make necessary corrections, the manuscript may become a useful document upon which future research on the subject matter can be based.</p>
