

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	Asian Journal of Case Reports in Medicine and Health
Manuscript Number:	Ms_AJCRMH_41067
Title of the Manuscript:	BILIARY ATRESIA PRESENTING AS POST CIRCUMCISSION EXSANGUINATION
Type of Article:	Case Study

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
The author responded to all comments, however, his explanation was accepted as regard: 1- Still not agree with this research topic as a case report. 2- Cholanioframe was not performed and the scoring system for biliary atresia (BA) was not followed so diagnosis of BA ca not be confirmed and other causes of cholestasis cannot be excluded. 3- As he mentioned that haemophilia is a common problem in his community, how can he exclude haemophilia as a cause of bleeding while he did not measure factor VIII, IX levels. 4- As I commented before, even if the infant had BA, the condition may be early to cause sever liver impairment and this horrible bleeding. 5- He mentioned that, the nurse "applied vitamin K injection" and in his response to the comments he said that, it was applied locally so you should remove the word "injection". 6- About the absence of new information regarding BA, which is not true, every year many researches are published discussing different aspects of BA i.e eitology, diagnosis, and prognostic marker of BA. 7- Lastly, due to difference in Microsoft office versions used by reviewers and authors I will not comment on editing mistakes, but spelling mistakes like: - Line 31: they.... The Line 6: month oldmale infant that died following prolonged bleeding that lasted for about 8 hours..... month old male infant who died following prolonged bleeding lasted for about 8 hours	-
