PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	ase report is of interest to general surgeons who every now and then come across cases of gallstone ileus. It is therefore of importance that the described treatment follows the mainstream treatment policy. The authors do not describe the conventional treatment with cholecystectomy and a closure of the fistula to the duodenum. I miss their explanation for their way of treatment.	sir patient is on follow up.. we have not disturbed the fistula during primary surgery as patient was in obstruction..so once the patient gives consent for cholecystectomy and repair of fistula, definitive surgery will be done...will update about the same in main manuscript..
Minor REVISION comments		
Optional/General comments
