SDI Review Form 1.6

**PART 1: Review Comments**

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b>Compulsory</b> REVISION comments	<p><b>My major comments are as follows.</b></p> <p>1) The major finding in the manuscript should state in conclusion. In this conclusion, "even though Gallstone ileus is rare cause of obstruction, when with elderly patients without any history of surgery, gall stone ileus should be considered". This case was not elderly patient because she was 48 years old. It is necessary to review the conclusion.</p> <p>2) Introduction should be included some references to provide factual background and clearly defined problems.</p> <p>3) Did the patient have medical history of gallstones? The authors should show the medical history of patient.</p> <p>4) What mean CECT? All abbreviations need to be shown before using abbreviations.</p> <p>5) Why did you perform cholecystectomy and repair of fistula in this operation? Do you have the plane to perform cholecystectomy and repair of fistula?</p> <p>6) Did you consider laparoscopic surgery? What incision size of laparotomy? How long was the patient hospitalized? Did you have any idea or discovery including the potential message for clinical practice for the readers?</p> <p>7) When figures are showed in the manuscript, "Figure" is used generally. Not "Image".</p> <p>8) Figures should be presented as per their appearance in the text. For example, .... (Fig. 1), .....</p> <p>9) What is the number and character on the upper left of CT image? Is it age of this patient?</p> <p>10) The authors should clearly show the figures. Lines and points which were not necessary were stated in figure. The authors should delate it. And, it is better to avoid handwriting.</p>	
<b>Minor</b> REVISION comments	<p>Here are the minor comments.</p> <p>1) The text should be prepared in single column format. The formats of discussion and conclusions are not unified.</p> <p>2) The word should unify. For example, gall stone -&gt; gallstone Space is not need between gall and stone.</p> <p>3) Incorrect characters are suspected in the manuscript. CASE REORT -&gt; CASE REPORT Even though Gallstone ileus is ... -&gt; Even though gallstone ileus is... ... should be considered. early surgery remains ... -&gt; ... should be considered. Early surgery remains ...</p> <p>4) All references should unify into the determined style.</p>	

SDI Review Form 1.6

<b>Optional/General</b> comments	The authors reported the "" a rare case of gall stone ileus with obstruction of small bowel". However, this disease and surgical treatments have already been reported. Therefore, it is very important the potential message for clinical practice including the manuscript. This manuscript was reviewed about past reports of gallstone ileus. I could not find the authors' message in the manuscript. I consider that the authors need to indicate what is important message from this case.	

As per the guideline of editorial office we have followed VANCOUVER reference style for our paper.
