

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	American Journal of Experimental Agriculture
Manuscript Number:	2014_AJEA_14400
Title of the Manuscript:	Performance and Carcass Evaluation of Broilers fed Whole Millet Meal in a Humid Tropical Environment
Type of the Article	Original Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
I still have a couple concerns: 1. I Think the discussion especially the part dealing with the lack of treatment differences in relative gizzard weights, should indicate that this lack of detectible differences relative to what has been reported before might be due to the small number of birds sampled in the current research. 2. The materials and methods indicate that the birds were weighed weekly. However, in your response to my suggestion that the performance data be presented by period (0-28 days, 28-56 days and 0-56 days) you indicate that these details are not available. Therefore, please change the materials and methods. 3. Similarly because you only have a final weight and total feed consumption, I think it is imperative that the feed conversion ratio be calculated as total feed consumed divided by total weight gain. Taking average daily feed intake and dividing it by the gain of the total period is not standard.	Thanks, now included in the text Now corrected to reflex that the initial weight of birds were taken at the beginning of the study while the final weight was taken at the end of the experiment Now corrected, thanks.
