Subject: Re: Request for editorial decision for manuscript number 2014_AJEA_15110

As you requested I have prepared my editorial decision. I send for your consideration my decision.

I have carefully read the manuscript and comments of Reviewers.

This manuscript contains important scientific findings that are the result of the comprehensive experiment.

Recently, much attention is paid to the research the role of silicon in vital activity of plants.

The problem of soluble silicon is important in agriculture.

The yield of plants and plant resistance to stress depend on the content of mobile silicon in soil.

Silicon has action upon the growth and developmental adaptation of plants.

Silicon increases the absorption of phosphorus by plants, silicon increases plant resistance to the stress.

Silicon converts to silicon-containing organic compounds under the influence of the root exudations.

This process is facilitated enzyme selikaza.

Reviewers' comments relate primarily to the tweaking of the manuscript.

The authors have given satisfactory answers to the comments of the reviewers.

The authors have made corrections and additions that have improved the manuscript, and led to a clearer presentation of the results of the experiment.

Reviewers' comments do not contain any comments that would put into question the results of the experiment.

The experimental procedure does not provoke objections.

List of references is fairly voluminous.

The article contains the original experimental results and can be published in your journal.

Editor's Details:

Vladimir K. Mukhomorov
