SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<u>Compulsory</u> REVISION comments	There are several consideration to this manuscript: 1. For a performance trial like the one reported here, you would need at minimum of 4 replicates per treatment and the whole experiment would need to be repeated at least 2 times. The results presented in this manuscript should not be published in its present form. 2. How does the ANOVA was performed? What software if one was used? What is the level of significance? This does not appear in any part of the document. 3. Some paragraph in the introductions needs references.	The data recorded were subjected to statistical analysis using analysis of variance technique under completely randomized design and in case of significant differences among treatments, means were determined by applying Duncan's Multiple Range test. Significant levels has been added.
<u>Minor</u> REVISION comments		
<u>Optional/General</u> comments
