SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	Put a full stop after "...spray regime" in line 126. Make it clear if/how "pod and seed development stages" relates with "...4, 6, 8 WAP". One would think that the insect data before the spray was meant to be a covariate to reduce the experimental error in the results. A comment on this is lacking in the data analysis. In line 158 the author is fitting the data in to a model and not subjecting..... Data analysis part is too brief, needs to elaborate on the fitting of different sets of data the author has, to model(s). The figures 0.14 and 0.06 in line 299, do not seem to be agreeing with the corresponding ones in Table 4.	
<u>Minor</u> REVISION comments	Correct Line 21-"sub-Saharan Arica" to "sub-Saharan Africa" Line 85- "pistil" author meant "pestle" Line 93: Subtitle not necessary, The author can have a paragraph starting as "Viability test was done..." and at the end of the paragraph state why it had to be done Line 100: 2.3 Land Preparation and Planting, as subtitle, . And have paragraphs thereafter, without subtitles. Line 112: It is not clear how a plot 1 X 1m and spacing of 30cm X 15cm would have 22 plants, not even when one considers guard row material Line 117: to read "Treatments and Data Collection" all subtitles can be removed to have paragraphs only. Additional sentence in the conclusion "Raising varieties and clones, for the purpose, with high py-content should be looked into, as the potency is dependent on the content."
