

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	American Journal of Experimental Agriculture
Manuscript Number:	Ms_AJEA_24950
Title of the Manuscript:	~~Evaluation the e~~ Effect of three tillage implements on potato yield and water use efficiency
New Title of the Manuscript:	Study the effect of three tillage implements on potato yield and water use efficiency
Type of Article:	Original article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
<u>1. Tables 1, 2 and 3 should be combined into one table (i.e a three-way table) and all variables clearly defined beneath the table.</u> <u>2. These tables contains data/information that were determined by the author(s) and therefore makes it part of their results. So the combined table should be sent to the results section as Table 1.</u> <u>3. Author(s) did not made mention in the materials and method that graphical representation of results was made as in Figs. 1 and2. This should be stated in the materials and methods. Use error bars on graph to show significant difference.</u> <u>4. The ANOVA table was poorly represented. It should have mean square values for the variables yield and water use efficiency with *, **, *** or ns to indicate significance or not against the mean square value.</u> <u>5. Detail comments are in the manuscript.</u>	We thank the reviewer for his valuable comments. 1. We combine Tables 1,2 and 3 in one table and moved it to result and dissection section . Results and discussion for soil and water characteristics as illustrated in Table (2) and inserted in the text in result and discussion section under 3.1. 2.We remove Figs. 1 & 2 and replaced them with means table (Table No. 5) in the text to show significant difference and LSD values instead of error bars on the graphs. 3.We re- written ANOVA Table to indicate significance or not against the mean square value. 4.We made all comments as appeared in the manuscript
