

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	American Journal of Experimental Agriculture
Manuscript Number:	Ms_AJEA_26238
Title of the Manuscript:	Abundance and diversity of insects associated with citrus orchards in two different agroecological zones of Ghana
Type of Article:	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
When the authors respond to referee, is necessary to indicate (by number of line(s) and pages), where changes have been made or not. Furthermore, the reasons by which they not did not accepted a suggestion of change, should be very well explained. The authors provide no organization and simplistic answers; the changes were not indicated in the text. Although the authors have complied with most of the changes, some priority suggestions have not been implemented. I keep insisting that performing an ANOVA is essential to improve the results, even because no statistical analysis was made in fact.	Sorry for the omissions (indicating lines, pages and highlighting changes). Although ANOVA, it is useful, it must be noted that, this work is a biodiversity study that seeks to generate a first comprehensive list of insects associated with citrus agro-ecosystem for conservation and pest management purposes. For biodiversity study of this nature we believe that the objectives of the manuscript have been well treated.
