SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments		
<u>Minor</u> REVISION comments	Tables and figures should be placed inside the text. Row 52: Should be written: feed conversion ratio (FCR) Row 132: The conclusions should be written in separate section.	
<u>Optional/General</u> comments	The manuscript entitled: "Production Protocol for Healthy Larviculture of Meagre (<i>Argyrosomus regius</i> Asso1801)", provides very important information for the aquaculture. Because <i>Argyrosomus regius</i> have good potential for aquaculture with fast growth, good feed conversion ratios, relatively easy larval rearing, controlled spawning in captivity. Moreover, the meagre appears to be an excellent candidate with many of the attributes that producers are looking for an aquaculture species. The manuscript is well written and deals with very important problems for meagre culture. In my opinion the authors presented the manuscript in a good way. In conclusion, the manuscript may be accepted for publication after minor revision.
