

**SDI FINAL EVALUATION FORM 1.1**

**PART 1:**

Journal Name:	<a href="#">American Journal of Experimental Agriculture</a>
Manuscript Number:	2013_AJEA_4929
Title of the Manuscript:	<b>The Relationship between Phenotypic, Testicular Traits and Serum Testosterone Levels in Pre-pubertal Male Boer Goat Crosses</b>

**PART 2:**

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
<p>It was difficult to follow corrections made with no reference to Line numbers. Thus comments and suggestions were made in the revised manuscript, as well as in the document with reviewer's first comments (text in red next to appropriate section) that have been attached with this feedback.</p> <p>The manuscript has improved, but some issues and suggestions have not been addressed. The authors should revise the manuscript accordingly before it can be accepted. Not enough attention has been given to the details (such as abbreviations and continuity of terms used). This makes the manuscript revision appear insufficient.</p> <p>Since the authors did not give reference to the line numbers where corrections were made, it was difficult to follow each author's comment simply stating "Done".</p>	

**Note: Anonymous Reviewer**
