

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	Asian Journal of Environment & Ecology
Manuscript Number:	Ms_AJEE_30791
Title of the Manuscript:	Biochemical changes in leaves of important trees exposed to pollution and exhausts at roadsides of Jabalpur, India
Type of Article:	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
The article has become much better after the revision. The authors have performed a more representative review of the literature. The abstract has become more informative. But I still can't find the statistical treatment of the material. As far as I can tell, judging by the given values and the error of the mean, the difference between the control and disturbed samples in the majority of the cases reach a statistically significant level, and therefore these results are reliable. All the more is the pity that the authors did not present the data that would enhance the importance of their report. It also would help to formulate the conclusions more clearly. Besides, the information value of the Fig. 3-14 would be higher, if error bars representing standard error or standard deviation were to be added there. In addition, there are minor errors in the formatting of the text, which will probably be corrected by the editor. For example, the formatting of captions of the figures and tables. Once again, the results are interesting.	With due regards to the reviewers and editors, this is to submit that the author is no more in a position to rearrange the results, and feels the presentations are sufficient. However, the Hon'ble editors are free to modify those if they wish so. A lot of corrections have already been rectified with thanks, but no more change can be done with the manuscript.
